

QUANTUM CITY

A JOURNEY INTO THE QUANTUM WORLD

ENERGY TOWERS OF QUANTUM CITY

Each building represents an energy level. Electrons live on floors (levels) and can teleport between floors using photon elevators. They can never stay between floors!

QUANTUM CITIZENS EXIST EVERYWHERE AT ONCE

Electrons don't stay in one spot. Before observation, they are in multiple locations simultaneously. Observation forces them to choose one.

TELEPORTATION TUNNELS UNDER THE CITY

Barriers don't stop particles. They pass through walls using hidden tunnels. Nothing like classical physics!

PARTICLES DON'T HAVE ADDRESSES - ONLY PROBABILITIES

You can only predict where a particle might be. It exists as a cloud of possibilities.

QUANTUM CITY RULES

CITY RULE	QUANTUM MEANING
No staying between floors	Energy is quantized
People can pass through walls	Quantum tunneling
People exist as clouds	Wave particle duality

QUANTUM CITY RULES

When you observe a quantum particle—it collapses into one position. Watching changes the outcome!
